

Plank Profile Microlined 25/250

<https://www.euramaxlab.com/paneel-types/facade-panels/plank-profiles-3>

25/250 refers to the depth of the panel (25 mm) & the height (200 mm). Micro lining of the panel surface is done for aesthetic reason or to enhance the structural strength. Plank profiles are continuously manufactured and cut to length after the roll forming process. They come in many different shapes and sizes. For structural performance reasons application should not exceed 6.000 mm. Application can be done vertically and horizontally.
